## QUICK MOLD CHANGE SYSTEM

It is an era for making high frequency mold change with multiple patterns and small quantity. In order to save time for the mold change and ensure the safety of the operation, it is just in time to apply Quick Mold Change System.

### Safety function of system

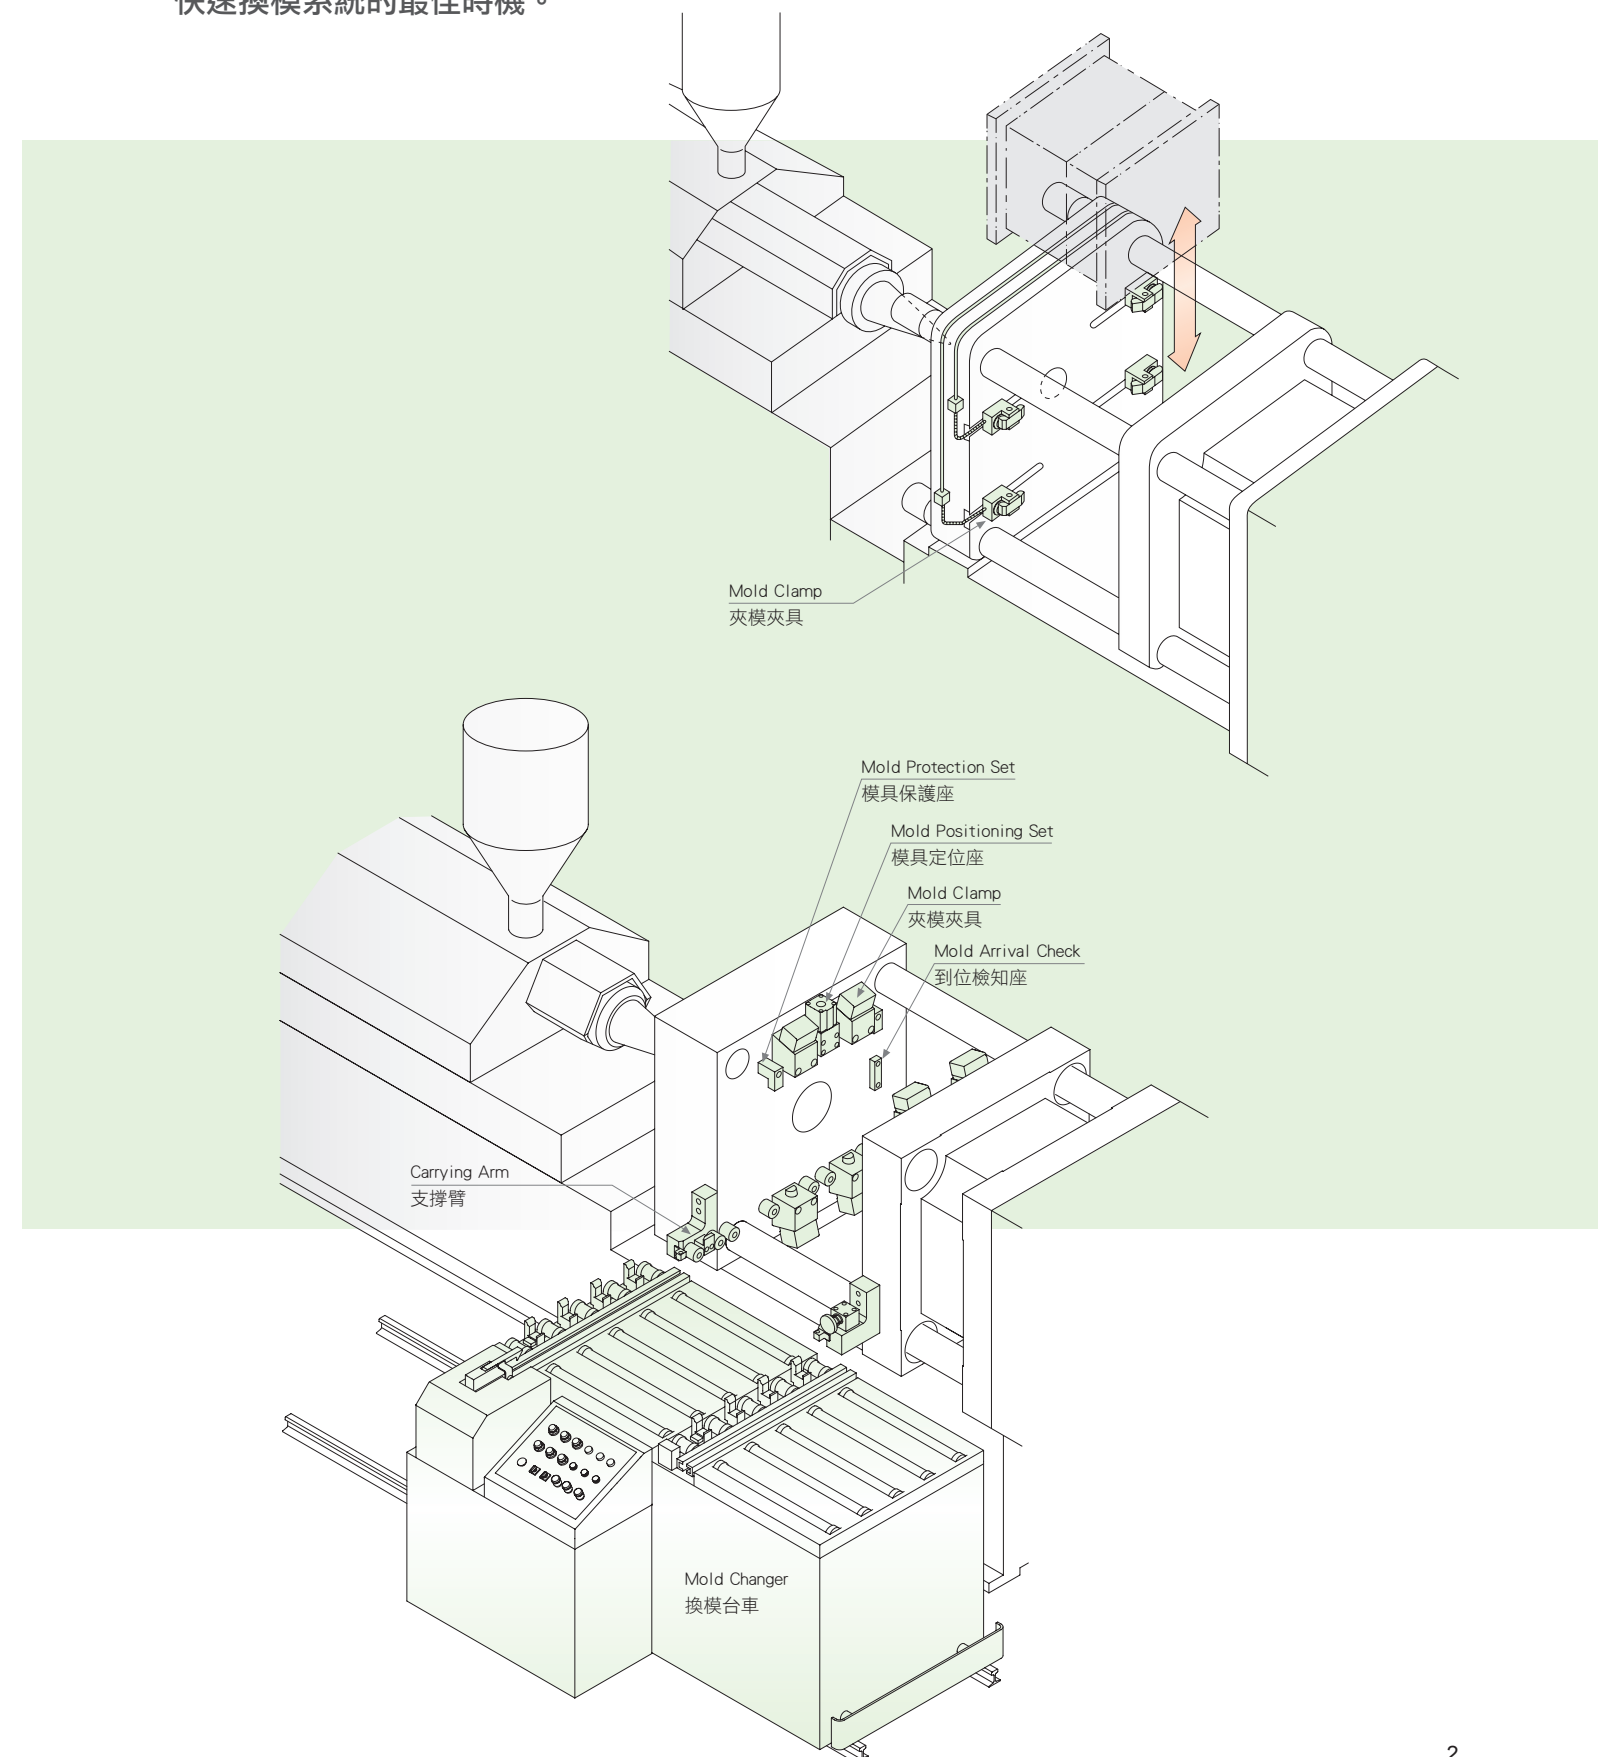

- Each hydraulic circuit has the function of checking and avoiding oil leaking.
- This system can add pressure automatically when the pressure reduction.
- Each hydraulic circuit has the function of inspection pressure and can be interlocked with the machine.
- It adopts the intersecting direction to clamp the mold.
- There are several functions to avoid operation error.

### 系統安全功能

- 各油壓迴路具有逆止防漏功能。
- 此系統具壓降時自動補壓功能。
- 各油壓迴路具低於安全壓力檢知功能，並與機台連線。
- 夾模採對角交叉方向鎖模控制。
- 操控具多項防呆功能。

## 快速換模 / 台車系統

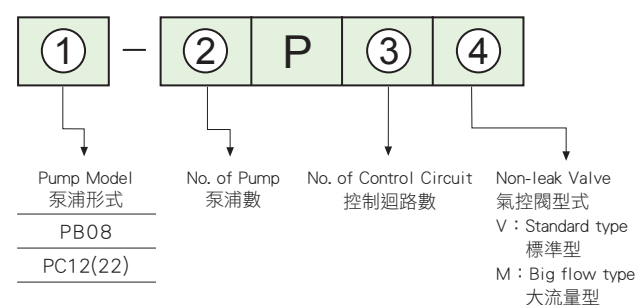

迎接少量多樣高頻率換模生產型態的時代，爭取換模時效、確保操作安全—正是導入快速換模系統的最佳時機。

- The hydraulic pump is driven by air. Once the outlet hydraulic pressure reaches the setting pressure, it will stop pumping which won't waste any energy. The pressure would be added automatically if the outlet pressure is reducing. It consists of the function to keep the pressure continuously.
- 利用空氣壓力驅動泵浦，出口油壓達設定壓力即停止作動不需繼續消耗能源，出口壓力下降則自動補壓，具持續保持該壓力功能。
